

Class Responsibilities Model

Actors- User, Website, Menu Recommendation System/Website	The Actors class consists of people, devices, and systems which produce information, such as computer/tech systems like the menu recommendation system. The user is a person who interacts with the system.
Objects- Menu Item, Search term, Search bar function, Login, Register, Registration, Restaurant, Establishment, Internet Browser, Account	The object's class consists of things, places, and events. The restaurant is a place, and other objects such as the menu item, search term/bar function, are things. The login, & register are events. These object class items are a vital component of our scenario as they consist of multiple things required to explain how the menu system functions.
Attributes- Password, Email address	These attributes are a vital component to explaining the scenario of logging in/registering an account. These are the attributes of login, register, and registration.
Irrelevant- Information, Restriction, Value, Message, North American, Chick-Fil-A, Google Chrome, Safari, Mozilla Firefox, Features, Access, Home Page	This class consists of object classes which were irrelevant to the scenario the conceptual model was based upon. This class contains objects which consists of details & explanations of the important concepts extracted from the objects class. For example, Safari is an object which is an detail of the Internet Browser class.
